Project-Based Learning (PBL) Report

Before you begin filling out this form, please make sure you have the following items ready:

- Your day-wise notes for all stages of Design Thinking — *Empathize, Define, Ideate, Prototype, and Test*
- Screenshots of your innovation
- Screen recordings showcasing your innovation's working model
- Images of your innovation created during the Day 2 take-home task

This form is designed to capture your reflections, ideas, and learnings from the innovations you developed as part of the **IBM SkillsBuild PBL activity**. Please take 5–10 minutes to complete it thoughtfully and honestly.

Name \*

SURENDAR T

Email ID (as per IBM Skills Build) \*

surendert1402@gmail.com

Phone number \*

9360448020

Trainer name \*

Aparna .R

Sanjai .M

Raju .P

College Name \*

University college of engineering Kanchipuram

Qualification (Degree) \*

## Day 1

### Design Thinking Process Step 1 & 2: Empathise & Define

#### Step 1: Understanding the Need \*

Which problem am I trying to solve?

The main problem I am trying to solve is the difficulty of managing student attendance accurately and efficiently using manual methods. Traditional attendance systems are time-consuming, prone to errors, and make it hard to track student attendance records over time. This project aims to provide a digital solution that simplifies attendance marking, reduces paperwork, prevents proxy attendance, and allows easy monitoring of student attendance by teachers and administrators.

#### Step 2: What is the problem?

The problem I want to solve in **one clear sentence**

[You can try a prompt like this: "I am ideating a solution for <enter your problem in detail> Convert this problem into a single clear sentence which I can share to an audience"]

The problem is that the current manual student attendance system is time-consuming, error-prone, and inefficient to manage and track attendance records accurately.

#### Why is this problem important to solve? \*

[You can try a prompt like this: "Draft 1-2 lines on why this problem is important to solve. Support this with evidence using relevant data points"]

This problem is important to solve because an efficient attendance system saves time, reduces errors, prevents proxy attendance, and helps institutions maintain accurate student records for academic evaluation and decision-making.

#### Take-home task \*

Ask 2–3 people (you can speak to your family members, friends, teachers, trainers) what they think about this problem. Write down surprising or new things you learn below.

One teacher mentioned that manual attendance takes a lot of class time and reduces actual teaching time, especially in large classrooms.

A friend shared that students sometimes give proxy attendance, which makes the records unreliable and unfair to regular students.

A family member was surprised to know that attendance records are still maintained on paper in many institutions, which can easily get lost or damaged.

## Day 2

### Design Thinking Process Step 3: Ideation

#### Step 3: Brainstorming solutions \*

List **at least 5 different solutions** (wild or realistic)

[You can try a prompt like this: "I am ideating solutions for <enter your problem in detail> Suggest 5 unique solutions for this problem, which I can easily accomplish in 2 days using free, open-source mobile-friendly AI tools"]

Mobile app for digital attendance.

Mobile-based attendance system.

Google Form with automatic record storage.

Face recognition-based attendance.

AI chatbot for attendance tracking.

#### Step 4: My favourite solution: \*

Mobile-based attendance system.

#### Step 5: Why am I choosing this solution?

\*

I am choosing this solution because it is easy to implement, saves time, reduces manual errors, and allows attendance to be managed efficiently using a mobile device.

#### Take-home task \*

Generate the image of your solution and how it will look (eg: "a bag that charges your phone while you walk")

Attach the image in this box below:

[You can try a prompt like this: "I am ideating a solution for <enter your problem in detail> I have selected a solution which includes <enter your solution description> Generate an image for this solution"]

Submitted files

## Question

Tools you can use for Day 2

### ChatGPT/Perplexity AI:

You can use these tools to compare your solutions and choose the most effective one

*AI Tools you can use  
for the take-home task:*

### Canva AI/CoPilot

**AI/Meta AI:** Use these mobile-based tools to generate images for the solution they want to design

## Day 3

*Design Thinking Process Step 4 & 5: Building & Testing my Prototype*

### Step 6: Prototype – Building my first version \*

What will my solution look like?

[Take inspiration from the image generated on Day 2 and describe the solution]

My solution will look like a simple and user-friendly mobile application for teachers. The app will have a login screen, a class selection page, and an attendance screen showing a list of students with present and absent options. Teachers can mark attendance with one tap, and the data will be saved digitally. The app will also display attendance summaries and reports, making it easy to track student attendance anytime.

---

What AI tools will I need to build this?

[You can try a prompt like this: *"I am ideating a solution for <enter your problem in detail> I have designed a solution which includes <enter your solution description> What open-source, free AI tools that I can use to build this solution? The tools should be easily available and accessible on my mobile. Do not recommend tools which requires cost or subscription"*]

\*

To build this solution, I will use AI tools like ChatGPT for planning, logic, and content generation, Figma for designing the mobile app interface, and Google Sheets with AI features for storing and analyzing attendance data. These tools are free, easy to use, and mobile-friendly.

---

Top AI tools I finally selected to build this solution? [Eg: Claude AI, Grok AI, Chatling AI]

Write it in 5 lines as 5 points

★

ChatGPT – for planning, problem-solving, and content creation

Claude AI – for clear explanations and documentation support

Grok AI – for quick idea generation and insights

Chatling AI – for building an AI-based chatbot interface

Canva AI – for designing UI mockups and presentations

---

### *Step 7: Test – Getting Feedback*

Who did I share my solution with? [You may share it with your trainer, peers or even AI] ★

I shared my solution with my trainer, classmates, and also tested it with AI tools to get feedback and suggestions for improvement.

---

What positive feedback did I receive? ★

I received positive feedback that the solution is simple, time-saving, and easy to use. They appreciated the mobile-based approach and felt it would reduce manual work and improve accuracy in attendance tracking.

---

What feedback did I receive for improvement?

★

I was advised to add features like better user authentication, attendance reports, and backup options to improve security, reliability, and overall usability of the system.

---

### **Take-home task**

Record your solution and test feedback in voice notes.

Upload your voice notes, images and your solution/model on GitHub

AI Tools you can use  
for Step 6-7:

**ChatGPT/Perplexity**

**AI/Claude AI/Canva AI/Chatling AI/Figma AI:** You can use these tools to build solutions/models or mock-up dummy prototypes

## Day 4

*Presenting & Reflecting on my Innovation*

### Step 8: Presenting my Innovation \*

Final Project Title:

AI-Based Student Attendance Tracking System

### Key points of my presentation

\*

[You can try a prompt like this with attachment/screenshot of your solution: "I am ideating a solution for <enter your problem in detail> I have selected a solution which includes <enter your solution description> I tested the solution with <enter details of who tested your solution> and they gave the following feedback <enter feedback given by the testers> Generate a 1-minute pitch document with following headings: project title, problem statement, my innovation, feedback I received from users, impact of my innovation. Add the attached image in the pitch document"]

Problem in manual attendance system

Importance of solving the problem

Proposed mobile app-based solution

AI tools used in the project

Benefits and future improvements

### Step 9: Reflections \*

What did I enjoy the most during this project-based learning (PBL) activity?

I enjoyed brainstorming ideas, designing the solution, and learning how AI tools can be used to

solve real-world problems. Building a practical project and thinking creatively made the learning process interesting and engaging.

---

Upload images of your day-wise notes/responses of all questions

You can also combine your images into one PDF file and upload
